subject : **Fuel surcharge 2022** **e-mail** : info@saan.nl

Dear Sir / Madam,

Since last September, fuel prices have continued to rise. At the end of 2021 our expectation was they would stabilize, but due to the current political and economic situation in the world, fuel costs have reached an all-time high in recent weeks. And unfortunately it doesn't look like a downward trend will start again anytime soon.

Fuel surcharge for kilometers driven

Until now, Saan has taken on the extra fuel costs, but now we can no longer avoid applying a fuel surcharge for all orders. You will find this fuel surcharge as a separate item on the invoice with effect from 21 March 2022. For the time being, the surcharge is only calculated by Saan for kilometers driven.

Calculation fuel surcharge

Our starting point is the diesel price at the end of January 2022. At that time, it was € 1.50 per liter. The surcharge is determined weekly on the basis of the extra costs per liter. This is determined every Monday morning, based on the current information that you can find at:

<https://www.evofenedex.nl/kennis/vervoer/dieselprijs>.

The extra cost per liter is multiplied by the fuel consumption, based on the average fuel consumption per vehicle type and the number of kilometers driven based on the vehicle's GPS data. The surcharge per litre, the scale for the average fuel consumption per vehicle type and a calculation example can be found on the page [Fuel surcharge on our website](#).

We assume that the fuel surcharge for kilometers driven will be a temporary measure, which will end when fuel prices fall below the price level at the end of January 2022 or when the Dutch government makes a compensation arrangement.

We rely on your understanding and assume that we have informed you sufficiently.

Kind regards,

Koninklijke Saan BV

Rutger Alferink
General manager
